Dr. Margot Löwenberg

Marketing Analytics I

Syllabus
Each Spring Semester

Last edit: 02.07.2015

Chair for Marketing and Market Research
URPP Social Networks
Department of Business Administration
University of Zurich, Switzerland

PREAMBLE

Welcome to our "Marketing Analytics I" syllabus!

«Data are just summaries of thousands of stories –
tell a few of those stories to help make the data meaningful.»

Chip & Dan Heath

This course is an introduction to marketing analytics. Today, companies heavily rely on data-driven marketing to better understand the needs of their customers. Through various data collection methods, they gather data on purchase behavior, social relationships, or attitudes. By analyzing such data, firms gain market insights and can enhance marketing decisions such as segmentation and targeting of customers, positioning of products based on customer preferences, or developing the right marketing mix. However, marketers lack knowledge on how data can be collected and how basic research techniques can be applied to analyze it.

This interactive introductory course to marketing analytics will start with generating ideas on how data can lead to better decision-making. Examining real-world business scenarios yields a number of opportunities such as optimizing the decision which customers to address with retention campaigns and which not, how to segment and target customers, or how to position products in a competitive market environment. Based on these ideas, research questions along with appropriate research designs and data collection methods will be discussed and applied in practice. This course will enable you to (1) select appropriate data collection methods, (2) explore data with basic data exploration tools, (3) apply appropriate quantitative analysis, and (4) generate meaningful implications which clearly outline how to optimize business processes.

This course will always take place in the spring semesters and is strongly recommended for Marketing Analytics II. This course will not replace any statistics courses, but rather be complementary to them. All necessary information concerning the course can be found within this syllabus. From time to time, updates will be posted on our website, and on the eLearning platform OLAT.

I am pleased to welcome you to this course. Enjoy this introduction.

All the best,

Margot Löwenberg

QUICK OVERVIEW:

Instructor:

Dr. Margot Löwenberg,

Office: Andreasstrasse 15, CH-8050 Zurich, Switzerland

Phone: +41 44 634 2918

E-mail: margot.loewenberg@business.uzh.ch

Web: www.market-research.uzh.ch

Office hours by appointment.

Teaching Assistant:

tba.

Type:

Lectures and exercises in form of a two-week block course.

Target Audience:

Bachelor students assigned to the „Wahlpflichtbereich" BWL 4.

Frequency:

Each spring semester.

AP (ECTS):

6

Work load statement:

Part	Workload	Total Time	ECTS
Course attendance	12 lectures à 90 min	18h	
Exercise attendance	12 exercises à 90 min	18h	
Lecture and Exercise preparation	14h per week, 2 weeks	28h	
Literature study	Preparation before class and exercises	44h	
Assignments	One individual and two group assignments (incl. preparation, presentation, and discussion)	72h	
Total		180h	6

Maximum Amount of Students:

Limited only by room size.

Content:

Practical introduction into understanding, applying, interpreting, and documenting quantitative market research methods to analyze marketing data by using R and R Studio.

Language:

English .

Basic Literature:

Field, Andy (AF) (2012), Discovering Statistics Using R, 1st ed., London et al.: Sage.

Hair, Joseph F. Jr.; Black, William C.; Babin, Barry J. & Anderson, Rolph E. (HBBA) (2010), Multivariate Data Analysis. A Global Perspective, 7th ed., Upper Saddle River et al.: Pearson.

Stock, James H, Watson, Mark W (2007), Introduction to Econometrics, 2nd ed., Boston: Pearson.

Additional literature will be given in class.

Prerequisite:

Recommended: Statistics, Empirical Research Methods.

Access:

Join our courses and make up your mind if you want to participate. Then officially register using the booking tool at the University of Zurich.

Grading:

Participation, assignments and presentations, multiple choice tests.

Dates:

Block-course, 08.-12.02.2016 and 15.-19.02.2016, 09.00-17:30.

Location:

tba.

Note:

This information in the syllabus supports the official information in the electronic university calendar (VVZ – Vorlesungsverzeichnis). In cases of doubt, the official information at the VVZ is valid.

1. INTRODUCTION AND OBJECTIVE

1.1 Course Purpose & Objectives

At the heart of marketing practice there is always a decision. One, for example, has to decide how to price a product, what kind of distribution channels one wants to use, or how to advertise a specific product. In order to reduce complexity and support one alternative from a multitude, analyzing data with quantitative marketing methods is essential in organizations. The purpose of this course is to gain a thorough understanding of instruments that can be implemented and applied to a diversity of marketing settings.

The objective of this course is to become accustomed with, understand, and apply quantitative marketing methods that are typically used in marketing analytics. The course will motivate and encourage students to practice these concepts in practical exercises, to develop a spirit of problem solving, and to enhance the ability to think in business terms. The course presents popular marketing research methods with practical exercises to familiarize students both with the theoretical and practical aspects of marketing methods.

This course should (a) sensitize students to typical data-driven marketing problems, (b) develop students' skills in collecting and preparing data, (c) introduce students to marketing research methods that are typically used in marketing management, (d) develop students' abilities to identify and apply the right methods and to draw the right conclusions from it, and (e) develop students' hands-on competence in marketing analytics.

1.2 Course Contribution towards Marketing Management

The course includes a comprehensive presentation of the main methods that are typically used to collect, explore, and analyze data relevant to marketing management. These elements are discussed in class and supported by examples. The approach adopted encourages students to critically evaluate given marketing situations and methods, to discuss their applicability, as well as to solve given marketing decision problems.

1.3 Course Contribution towards Analytical Competence

The course presents the main quantitative marketing instruments necessary to obtain and use data that are applied in the professional world and which help marketing managers to use data appropriately, to analyze marketing situations, to formulate marketing strategies and plans, and to evaluate their impact. The students' understanding of these analytical instruments, taught to them from basics, is realized through theoretical discussions, examples, exercises, and practical assignments. While many books separate different methods and tests, the approach in this course is to build a unique perspective that draws similarities across several statistical methods and tests.

1.4 Course Contribution towards Correctly Understanding and Applying Marketing Instruments

One course objective is to show how analytical marketing instruments can support marketing decisions. The quantitative methods presented and discussed in class will be instruments providing students with an image of the complexity and pitfalls of typical marketing problems. These instruments have to be correctly applied by students in order to successfully solve their assignments.

1.5 Course Contribution towards Critical Thinking, and Problem Solving Skills

As all instruments are directly applied to realistic marketing situations, students need to formulate the related marketing problem and marketing questions to these given situations. Problem solving skills are developed as a consequence of applying quantitative methods and alternatives are also discussed in class. In order to foster critical thinking, the results of quantitative marketing methods are interpreted and critically analyzed.

1.6 Course Contribution towards Ethical and Social Responsibility

The cases that are presented in class integrate ethical questions in order to develop a sense of ethical and social responsibility and to actively generate an understanding of different cultural perspectives. An open minded, tolerant, and respectful atmosphere within class is necessary to maintain this. The pedagogical approach adopted in this course encourages students to participate contributing their opinions, experience, and comments to the discussions developed around the presented marketing methods and to seriously consider and discuss other's opinions.

1.7 Course Contribution towards the Development of Good Teamwork and Communication Skills

The capability to effectively work in teams and to communicate during the working process is an essential skill for marketing managers. The pedagogical approach adopted in this course encourages students to participate in class forwarding their opinions, experience, and comments to the discussions developed around the presented marketing methods. The exercises are partly conducted in groups so that the course encourages students to develop interpersonal communication skills, as well as to debate and negotiate ideas and decisions during their group work. Finally, students are obliged to use both verbal and written communication during their course work which reinforces these skills.

2. COURSE MATERIAL

Students have access to our web-based e-learning platform on OLAT to download the slides presented in class, find other relevant material such as datasets and literature, and discuss with classmates the latest topic in class. The following procedure is strongly recommended as preparation for the classes.

2.1 Overview of classes

On our webpage, an overview of all classes given by our team can be found. Students can develop an idea of the classes and how they best fit into their personal agenda. Important: our block-courses Marketing Analytics I and Marketing Analytics II are only offered once a year.

2.2 Hands-on guides

Several files have been prepared that provide background knowledge of the expectations in the classroom and some tips concerning "How to give presentations in class", "How to write in an academic style", etc.. Those guides should be read prior to class to obtain a good understanding of what is expected.

2.3 Syllabus

For each course, a syllabus exists with all details concerning that specific course. This is the guideline for the class and a MUST read. Everything concerning the grading of the course, the agenda, the planned topics, the workload, readings, and much more can be found in the syllabus.

2.4 The Slides

The slides presented and discussed in class are available on the e-learning platform. Slides can be downloaded for each class. The slides do not completely cover the entire syllabus; therefore it is necessary to participate in class.

2.5 The Reading List

The reading lists are split into three categories depending on the time and involvement in the class. REQUIRED readings are necessary readings before each class and prepare for the actual content. RECOMMENDED readings are articles that go into more details on the specific topics. FOLLOW-UP readings apply the learned knowledge within different marketing areas and allow students to establish utilization of the learned methods.

2.6 Additional Materials

The academic and professional papers published online or in marketing journals can also be used by students to obtain additional information about marketing concepts, theories, and methods. The following journals are reputable and are therefore strongly recommended:

Marketing journals:

Journal of Marketing, Marketing Science, Journal of Marketing Research, Journal of Consumer Research, International Journal of Research in Marketing, Journal of the Academy of Marketing Science, Quantitative Marketing and Economics, Journal of Interactive Marketing, Journal of Business Research, Journal of Service Research, Journal of Product and Innovation Management

Management journals:

Academy of Management Review, Academy of Management Journal, Management Science, Administrative Science Quarterly, Strategic Management Journal

For inspiration:

Harvard Business Review, Sloan Management Review, McKinsey Quarterly

3. COURSE CONTENTS

3.1 Overview of lectures and exercises*

Week 1:				
MONDAY	**TUESDAY**	**WEDNESDAY**	**THURSDAY**	**FRIDAY**
9.00-10.30 Introduction to Marketing Analytics (L)	9.00-10.30 Data Collection I – Experimental Design (L)	9.00-10.30 Data Collection III – Advances in Data Collection (L)	9.00-10.30 Data Exploration II – Graphical Profiling, Missing Values, and Outliers (L)	9.00-17.30 Group Assignment I
11.00-12.30 Introduction to Marketing Research (L)	11.00-12.30 Data Collection I – Experimental Design (E)	11.00-12.30 Data Collection III – Advances in Data Collection (E)	11.00-12.30 Data Exploration II – Graphical Profiling, missing values, and outliers (E)	
14.00-15.30 Introduction to R I (E)	14.00-15.30 Data Collection II – Survey Design (L)	14.00-15.30 Data Exploration I - Basics (L)	14.00-15.30 Data Exploration III – Testing Basic Assumptions (L)	
16.00-17.30 Introduction to R II (E)	16.00-17.30 Data Collection II – Survey Design (E)	16.00-17.30 Data Exploration I - Basics (E)	16.00-17.30 Data Exploration III - Testing Basic Assumptions (E)	
Week 2:				
MONDAY	**TUESDAY**	**WEDNESDAY**	**THURSDAY**	**FRIDAY**
9.00-10.30 Covariance and Correlation (L)	9.00-10.30 Regression Analysis I: Simple and Multiple Regression (L)	9.00-10.30 Presentation Group Assignment I (L)	9.00-17.30 Group Assignment II	9.00-10.30 Repetition and Feedback
11.00-12.30 Covariance and Correlation (E)	11.00-12.30 Regression Analysis I: Simple and Multiple Regression (E)	11.00-17.30 Group Assignment II		11.00-17.30 Presentation Group Assignment II
14.00-15.30 T-tests and ANOVA (L)	14.00-15.30 Regression Analysis II: Testing Assumptions of Regression Models (L)			
16.00-17.30 T-tests and ANOVA (E)	16.00-17.30 Regression Analysis II: Testing Assumptions of Regression Models (E)			

* Preliminary outline for FS 2016, this schedule is subject to change; L = lecture, E = exercise.

3.2 Details of classes and required reading*

Topic and Key Terms	Learning objectives	Readings
Introduction to Marketing Analytics I Correlational research methods, cross-sectional data, descriptive statistics, error, experimental research methods, inferential statistics longitudinal data, market research, model, model fit, population, sample.	(1) Get an idea of why and how we do research. (2) Understand why gathering and analyzing data is important for organizations. (3) Get an idea of whether this course fits to your needs.	**Required reading** Field A., Miles J. & Field Z. (2012) Discovering Statistics Using R. 1st edition. London et al.: Sage. p. 1-7. **Recommended reading** Kotler, P. (1972) A Generic Concept of Marketing. Journal of Marketing. 36 (April). p. 46-54. Bagozzi, R. P. (1974) Marketing as an Organized Behavioral System of Exchange. Journal of Marketing. 38 (October). p. 77-81. Bagozzi, R. P. (1975) Marketing as Exchange. Journal of Marketing. 39 (October). p. 32-39. Hunt, S. (1976) The Nature and Scope of Marketing. Journal of Marketing. 40 (July). p. 17-28. Hunt, S. (1983) General Theories and The Fundamental Explananda of Marketing. Journal of Marketing. 47 (Fall). p. 9-17.
Introduction to Marketing Research Alternative hypotheses, categorical variable, continuous variable, discrete variable, dependent variable, independent variable interval scale, latent variable, marketing, market research, market research process, manifest variable, measurement error, measurement level, mediator, moderator, nominal, null hypothesis, objectivity, ordinal scale, qualitative data, quantitative data, ratio scale, reliability, research question, test statistics, theory, validity.	(1) Learn the steps in the Market Research process. (2) Learn how to generate research questions from a business problem. (3) Learn how to use theories and concepts to generate hypotheses and how to test them. (4) Learn how to generate managerial insights from the results.	**Required reading** Field A., Miles J. & Field Z. (2012) Discovering Statistics Using R. 1st edition. London et al.: Sage. p. 8-61. **Recommended reading** DeCarlo, L. T. (1997) On the Meaning and Use of Kurtosis. Psychological Methods. 2 (3). p. 292-307. Cohen, J. (2009) Mission Improbable: A Concise and Precise Definition of p-value. [Online] Science Now Daily. Available from: http://news.sciencemag.org/sciencenow/2009/10/30-01.html. [Accessed: August 24th, 2011]. Cohen, J. (1990) Things I have learned (so far). American Psychologist. 45 (12). p. 1304–1312. Cohen, J. (1994) The earth is round (p < .05). American Psychologist. 49 (12). p. 997-1003. **Follow-up reading** Gelman, A. & Weakliem, D. (2009) Of Beauty, Sex and Power. Too little attention has been paid to the statistical challenges in estimating small effects. The American Scientist. 97. p. 310-316.

Topic and Key Terms	Learning objectives	Readings
Data Collection I - Experimental Design A/B testing, dependent variable, independent variable, test units, treatment group(s), control group, intervening (or extraneous) variables, between subject design, within subject design, factorial design, fractional design, internal validity, external validity, randomization, matching, true experiment, quasi experiment, natural experiment, laboratory vs. field experiment, single vs. multiple treatments.	(1) Learn to distinguish between different types of experiments and treatments. (2) Learn how to sample subjects from the population. (3) Learn how to design experiments and corresponding treatments in various situations. (4) Learn how to analyze data generated via experiments.	**Required reading** Andersen, E. & Simester, D. (2011) A Step-by-Step Guide to Smart Business Experiment. Harvard Business Review. (March). p. 98-105. Reips, U. D. (2002) Standards for Internet-Based Experimenting. Experimental Psychology. 49 (4). p. 243-256. **Recommended reading** Field A., Miles J. & Field Z. (2012) Discovering Statistics Using R. 1st edition. London et al.: Sage. p. 197-263. Hair, J. F. Jr., Black, W. C., Babin, B. J. & Anderson, R. E. (2010) Multivariate Data Analysis. A Global Perspective. 7th edition. Upper Saddle River et al.: Pearson. p. 439-476. Davenport, T.-H. (2009): How to design Smart Business Experiments, Harvard Business Review, February, 69-76. **Follow-up reading** Huberty, C. J. & Morris, J. D. (1989) Multivariate Analysis Versus Multiple Univariate Analysis. Psychological Bulletin. 105 (2). p. 302-308. Mohr, J. Nevin, J. R. Data Exploration I - Basics Central limit theorem (CLT), confidence interval, degrees of freedom (df), distribution, frequency, kurtosis, interquartile range, measures of central tendency, model, median, mean, normal distribution, power-law distribution, probability, range, sampling distribution, skewness, standard deviation, standard error, sum of squares, total error, variance, z-score.	(1) Describe the distribution of variables (shape, central tendency, spread). (2) Learn what degrees of freedom and confidence intervals are and wherefore we need it. (3) Learn how to calculate probabilities.	**Required reading** Field A., Miles J. & Field Z. (2012) Discovering Statistics Using R. 1st edition. London et al.: Sage. p. 13-61. Hair, J. F. Jr., Black, W. C., Babin, B. J. & Anderson, R. E. (2010) Multivariate Data Analysis. A Global Perspective. 7th edition. Upper Saddle River et al.: Pearson. p. 33-42. **Recommended reading** DeCarlo, L. T. (1997) On the Meaning and Use of Kurtosis, Psychological Methods. 2 (3). p. 292-307. Cohen, J. (2009) Mission Improbable: A Concise and Precise Definition of p-value. [Online] Science Now Daily. Available from: http://news.sciencemag.org/sciencenow/2009/10/30-01.html. Too little attention has been paid to the statistical challenges in estimating small effects. The American Scientist. 97. p. 310-316.

Topic and Key Terms	Learning objectives	Readings
Data Exploration II - Graphical Profiling, Missing Values, and Outliers Bivariate graphical profiling, boxplot, histogram, imputation, missing at random (MAR), missing completely at random (MCAR), missing values, multivariate graphical profiling, not missing at random (NMAR), numerical profiling, outliers, shape of a distribution, scatterplot, univariate graphical profiling.	(1) Learn how to select appropriate graphical methods to examine the characteristics of the data and the relationship of interest. (2) Assess the potential impact of outliers and reasons for their existence. (3) Assess the potential impact of missing values and reasons for their existence.	**Required reading** Field A., Miles J. & Field Z. (2012) Discovering Statistics Using R. 1st edition. London et al.: Sage. p. 116-165. Hair, J. F. Jr., Black, W. C., Babin, B. J. & Anderson, R. E. (2010) Multivariate Data Analysis. A Global Perspective. 7th edition. (2005) Working with Missing Values. Journal of Marriage and Family. 67. p. 1012-1028.
Data Exploration III – Testing Basic Assumptions Box's M-test, data transformations, log-, square-root-, reciprocal transformation, endogeneity, heteroskedasticity, homogeneity of variance, homoscedasticity, independent scores, Kolmogorov-Smirnov test, Levene's test, marginal distribution, multi-collinearity, normal distribution assumption, parametric tests, p-p-plot, q-q-plot, robustness Shapiro-Wilk test, uncorrelated errors.	(1) Understand what assumptions are and why it is necessary to test them. (2) Learn how to verify assumptions. (3) Learn how to handle data which do not meet assumptions.	**Required reading** Field A., Miles J. & Field Z. (2012) Discovering Statistics Using R. 1st edition. London et al.: Sage. p. 166-204. Hair, J. F. Jr., Black, W. C., Babin, B. J. & Anderson, R. E. (2010) Multivariate Data Analysis. A Global Perspective. 7th edition. Topic and Key Terms	Learning objectives	Readings
T-tests and ANOVA ANCOVA, between group design, dependent t-test, effect size r, effect size w, family-wise error, factorial ANOVA, F-distribution, F-ratio, independent t-test, MANOVA, mean sum of squares, model sum of squares, one-way ANOVA, post-hoc test, repeated-measures design, residual sum of squares, total sum of squares.	(1) Understand how the t-test can be used to compare two means. (2) Understand how to apply and interpret one-way ANOVA (GLM1) to compare several means.	**Required reading** Field A., Miles J. & Field Z. (2012) Discovering Statistics Using R. 1st edition. London et al.: Sage. p. 359-549. **Recommended reading** Hair, J. F. Jr., Black, W. C., Babin, B. J. & Anderson, R. E. (2010) Multivariate Data Analysis. A Global Perspective. 7th edition. Upper Saddle River et al.: Pearson. p. 439-476. Garson, G. D. (2009) Univariate GLM. [Online] Statnotes: Topics in Multivariate Analysis. Available from: http://www.statisticalassociates.com/glm_univariate.htm. [Accessed: February 15th 2013]. **Follow-up reading** Huberty, C. J. & Morris, J. D. (1989), Multivariate Analysis Versus Multiple Univariate Analysis. Psychological Bulletin. 105 (2). p. 302-308. Mohr, J. & Nevin, J. R. (1990) Communication Strategies in Marketing Channels: A Theoretical Perspective. Journal of Marketing. 59 (October). p. 36-51.
Regression Analysis I: Simple and Multiple Regression Adjusted R-squared, all-subset methods, backward method, confidence interval, dummy coding, forced entry method, forward method, F-ratio, hierarchical method, intercept, least squares method, mean sum of squares, model sum of squares, multiple regression, ordinary least squares (OLS), R-squared, regression coefficients, residual sum of squares, simple regression, slope, standardized coefficients, stepwise total sum of squares, t-test, variance decomposition, unstandardized coefficients.	(1) Get familiar with the method of least squares. (2) Learn how to assess individual predictors. (3) Understand how to run simple and multiple regression analysis in R and how to interpret the results of such an analysis.	**Required reading** Field A., Miles J. & Field Z. (2012) Discovering Statistics Using R. 1st edition. London et al.: Sage. p. 245-266, p. 267-286, p. 302-308. **Recommended reading** Hair, J. F. Jr., Black, W. C., Babin, B. J. & Anderson, R. E. * Preliminary outline for FS 2016, this list is subject to change, additional literature might be given in class.

4. EVALUATION

This course consists of three formal assessment opportunities. There will be no exam at the end of this course.

4.1 Multiple Choice Tests (25%)

Multiple Choice Tests (MCT) are handed out at the beginning of each day. The contents of the previous day will be covered in 10 MC questions. To receive credit for the MCT, students must be attending the lectures on time and answer the corresponding MCT's.

4.2 Group assignments (50%)

We will assign students into groups to work on group assignments pertaining to the topics of the class. Depending on the number of students registering for this course, group sizes and the number of groups may vary. Each group will be assigned one assignment in each week.

The evaluation is based on the contents of the presentation, the corresponding R-code, as well as the structure and style of the presentations given in class. Students receive credits for correct solutions, basic and advanced R-commands or functions, as well as for interpretations of the results and deriving implications for marketing managers. In addition, students must follow our style guidelines for slide presentations as well as R-Codes.

We will issue peer evaluation forms at the end of the course in which students will be asked to evaluate their peers' performance during the group assignments. The peer evaluation refers to all assignments and will be part of the group assignment grade.

4.3 Individual participation in class and individual assignment (25%)

Credits are awarded for thoughtful and active oral participation in class and in exercise discussions throughout the course. Credits will be given for correct articulation of arguments and comments, contribution to case discussions, and knowledge of readings. Participation will be evaluated for quality as well as consistency. Students will also have to work on and hand in one individual assignment.

In addition, each student can individually contribute by working in more detail on a topic covered in class the student is particularly interested in (e.g., by preparing a presentation, by collecting data, or by coding). We especially offer this opportunity to those students who do not feel comfortable actively interacting in the classroom.

We strongly recommend that you participate in all classes, do the readings, and follow our instructions. Attending the class and the exercises regularly and on time is an indication of professionalism and will also improve your participation grade.

5. ACADEMIC FRAUD

Academic fraud is an act by a student, which may result in a false academic evaluation of that student or of another student. The Honor Code of the University of Zurich applies to all work in this course, and will be strictly enforced. The intent of the Honor Code in this course is to ensure that each student claims and receives credits for his/her own efforts. Violations to this are considered academic fraud.

6. ADMINISTRATIVE COMMENTS

6.1 Students with disabilities

Any student with a documented disability needing academic adjustment or accommodations is requested to speak with the instructor of this course during the first day of the course. All discussion will remain confidential. Students with disabilities will need to also contact the directors of the school.

6.2 Registration cards

Registration cards will be handed out at the beginning of the course. Students will be asked to add a recent picture and some personal information. The information is kept confidential and is only accessible to our team. We will need this information to learn the students' names by pictures and for administrative reasons. Delivering these files is of course voluntary.

6.3 Name plates

Name plates should be used regularly in class so that we can learn the students' names. Name plates will be handed out during the first day of the course.

6.4 Getting in contact

Emails should be short and to the point. Before sending an email it should be clarified that email is the right medium for the question or concern at hand. Questions can also be ask at the beginning of or during lectures and exercises.

6.5 Class dismissal

Students are asked to remain seated and attentive until class is dismissed by the lecturer or teaching assistant.

6.6 Sound-emitting devices

It is expected that everybody turns off/mute all devices that emit sounds and noises that may interrupt the class (e.g., mobile phones, pagers, watch alarms). If an occasion arises, in which a student may need to receive a phone call, he or she has to inform the lecturer or teaching assistant before class.

6.7 Laptops and calculators

Laptops, tablets, mobile phones, and programmable calculators are allowed in class if indicated by the lecturer or teaching assistant and as far as their usage supports the individual learning process. Otherwise they are not permitted.

6.8 Important deadlines and class schedule

All important deadlines and the class schedule are communicated in the first lecture. If a student cannot participate in this lecture, it is his/her duty to obtain any relevant information.

We are very much looking forward to meet you in class!
